

12" culvert

## Mystery Bay Culvert Replacement Project

A 12' culvert clogged with barnacles was restricting tidal flows into the salt marsh at the south end of Mystery Bay (Jefferson Co. WA). The culvert was replaced by a concrete utility vault with a 6' by 5' opening. This allows full tidal flow as well as improved access for marine life to the salt marsh and mud flats.

**Project Management:**  
Jefferson Co. Conservation  
District

- Project Funding:**
- Landowners
  - WA Dept. of Fish & Wildlife  
*Landowner Incentive Program*
  - WA Conservation Comm.  
*Professional Engineering & Puget Sound Grants.*
